

Infobric Equipment and Assets Environmental Policy

We offer services to vehicle owners as well as machine and tool owners, simplifying their daily lives and contributing to sustainable community development through their use. Through technological solutions, we aim to create a simpler and more efficient way of working, so good that they cannot imagine being without them.

Infobric Equipment and Assets, working towards the United Nations' Global Sustainable Goal No. 9 (Sustainable Industry, Innovation, and Infrastructure), aims to contribute to increased resource efficiency in our operations and in our services and products. This will be achieved by:

- Assisting our customers in reducing their environmental footprint and
- working to minimize our environmental impact in business travel.

These efforts will be undertaken with consideration for technical and economic resources within the framework of applicable laws and other binding requirements. Infobric Equipment and Assets, in all aspects, will conduct its operations with limited and reducing environmental impact, and employees are expected to actively contribute with their personal commitment and interest to meet stakeholders' expectations and pursue continuous improvements in environmental practices.
