

# Infobric Equipment and Assets Information Security Policy

*We want our customers to trust that all their data, processed by Infobric Equipment and Assets, adequately protected, and handled with care. Whether it involves trips in a driving journal, equipment management, analysis of a fleet of vehicles, or user data processed in Infobric Equipment and Asset's systems, we want the information to be accurate, readily available, and accessible only to individuals with the correct authorization.*

Infobric Equipment and Assets are committed to ongoing, systematic efforts in upholding and improving information security. Thereby ensuring the delivery of secure systems and services that not only meet customer expectations but also uphold the privacy rights of our users.

These requirements are achieved through continuous improvements in information security, which is an integral part of our operations, flexibility in adapting to customer requirements, and compliance with laws and other requirements to protect the company and stakeholders from harm and minimize risks.

Infobric Equipment and Assets stays continuously protected against new threats by utilizing the latest technology for firewalls, antivirus protection, continuous vulnerability testing and monitoring. Infobric Equipment and Assets also has a System Operations Team that consistently works on monitoring and securing the availability of our systems and services.

All employees at Infobric Equipment and Assets participate in the work in upholding and improving information security and undergo ongoing information security training tailored to their tasks.
